

ProShow Gold Release 4.0 Styles

Larry Plyter - January 21, 2009

ProShow Gold Version 4.0 introduces Styles created by Photodex. These styles are in effect templates that include established size, motion and effects to produce exciting slides. All you have to do is insert the applicable images into a slide, select a style, and then apply that style.

Once the result is present, you can tweak it if you want a little different effect, such as the duration of the slide. This will not change the style for future use. If it isn't what you wanted, just select No Style from the list of styles and apply. This will undo the style applied.

The following is the name of all the styles created by Photodex and their description as shown currently in Version 4.0.2462. I have added the number of images to use with each of them. Some of them may not be 100% correct, but should be used as a guideline for which style you select and what images you should use.

If you have created a special effect on your own, it can be created and saved for future use. This takes a little practice, but can save you lots of time in the future.

1

A Moving Backdrop

A centered color image overlayed on top of a dramatic black & white moving backdrop. One image

A Photo Border

An image subtly zooming in beneath a black and white photo border mask. One landscape oriented layer. One image

A Photo Border 4x3

An image subtly zooming in beneath a black and white photo border mask. One landscape oriented layer. One image

Coasting

An image that zooms into view as it coasts across a dimmer full-screen version of the same image. One image

Colorize Grayscale

Converts your layer to a black & white image. One image

Colorize Sepia Antiqued

Converts your layer to a sepia-tinted image, producing a warm, antiqued look. One image

Photo Stack 2 Still

Three images fanned out like a deck of cards on a white background. Use portrait oriented images. Version 4.0 states 3 images, but it is five images.

1

Scrolling Credits

Features editable captions to create your own scrolling credits slide using an image of your choosing for the background. One image

Single Snapshot

An image zooms out as it falls to the center at an angle. Try adding a blank white slide before the current slide to simulate a photo flash - use a slide time of 0.1 sec with 1 sec transition. Use landscape oriented image. One image

Single Snapshot Still

An image is arranged in the center of the screen at an angle. Try using this style to complete the effect created by the animated version of this style. Use landscape oriented image. One image

Spin and Grow

Image spins dramatically into view from a distance. Works best when followed with a slide using the Spin & Shrink style or the Still Photo White style. One image

Spin and Shrink

Image spins dramatically away from view. Works best when preceded by a slide using the Spin & Grow style or the Still Photo White style. One image

Still Photo Black

Image is centered, partially filling the screen. A drop shadow on a black background. One image

Still Photo White

Image is centered, partially filling the screen. A drop shadow on a white background. One image
